Graduate-level experience with Java and C++.

High self-motivation and adaptability, as well as exceptional written and verbal communication skills.

Experience

Boston University / Application Developer (Full Stack)

January 2021 - June 2023, Boston, MA

- Designed and built 4 full stack web applications on a LAMP stack as solo projects.
- Maintained and refactored additional web applications to enhance usability, add new features, and future-proof code.
- Most impactful project, COM Video, consisted of three separate, but fully-integrated web applications. Built from the ground up, COM Video replaced an outdated system for uploading, managing, and streaming video content. Used Google Drive API and Kaltura API to improve speed and efficiency of uploads and streaming.
- Created my own agile software team (was the sole developer in my department) to focus on constant feedback, collaboration, and ensure rapid delivery of new features to applications. Recruited two coworkers, who in turn recruited students for collaboration.

Boston University / Desktop Support Specialist I

March 2015 - December 2020, Boston, MA

- Effectively managed a team of 6-8 student employees, which included hiring, training, and scheduling.
 - Provided comprehensive software and hardware support for macOS and Windows clients. Including fully remote support via Windows and Apple Remote Desktop.
 - Monitored and maintained over 200 machines using Quest KACE Management Appliance and JAMF Pro.
-

Education

Boston University / M.S. in Computer Science

2017 - 2020, Boston, MA

Boston University / B.A. in Anthropology

2009 - 2013, Boston, MA
